Editors:

Thank you for reviewing our paper *Daily reference evapotranspiration for California using satellite imagery and weather station measurement interpolation*. This paper describes an important research application for California water resources, that we feel would have broad interest.

I did my best to follow both the guidelines for LaTeX publications and the guidelines described in the submission process.

The biggest problem I had was regarding figures, since they are typically combinations of images and tex file overlays for more consistent fonts within the document. I have left the original figure definitions embedded in the LaTeX file, but by default they are not used, and I have instead included standalone pdfs for all figures and tables, as expected by the submission process. Also from the submission guidelines, I have included captions in the document, but not on the figures themselves.

Let me know if there is a better way to format this document for submission. Please contact me at qjhart@ucdavis.edu if you have any questions.

Best,

Quinn Hart
